

The Bush Tax Plan, State-by-State

Citizens for Tax Justice today released a state-by-state analysis of the final version of President Bush's tax cut plan, as signed by the President on May 28. The analysis was performed using the Institute on Taxation and Economic Policy's Tax Model.

The analysis shows how the enacted tax cuts will affect taxpayers at various income levels in each state and the District of Columbia for each year from 2003 to 2006, and estimates the total tax cuts accruing to each income group for the entire four-year period.

Low- and Middle- Income Taxpayers: Nationwide, the bottom 60 percent of taxpayers will receive, on average, a total of \$350 over the next four years, or less than \$100 per year. Citizens of wealthier states generally get larger average tax reductions, while residents of poorer states get smaller average tax reductions. For example:

- The four-year tax cuts for the bottom 60 percent of taxpayers in seven states—New Hampshire, Connecticut, Alaska, New Jersey, Minnesota, Vermont, and Maryland—are more than 40 percent higher than the national average tax cuts.
- In contrast, the poorest 60 percent of taxpayers in eight states—Mississippi, Louisiana, West Virginia, Alabama, South Carolina, Tennessee, Arkansas and Kentucky—will receive a four-year tax cut of more than 25 percent below the national average.

The wealthiest taxpayers: Nationwide, the wealthiest 1 percent of Americans will receive, on average, a total of \$96,634 in tax cuts over the next four years. In individual states, this figure ranges from a high of \$213,514 in Connecticut to a low of \$33,775 in West Virginia.

The tables that follow show the annual effects of the final version of the Bush tax plan as signed by the President, on a state-by-state basis.
